Introduction

4

The Records Management Code of Practice for Health and Social Care 2020 (from this point onwards referred to as the Code) is a guide for you to use in relation to the practice of managing records. It is relevant to organisations working within, or under contract to, the NHS in England. This includes Public Health functions in local authorities and Adult Social Care where joint care is provided with the NHS.

The Code provides a framework for consistent and effective records management based on established standards. It includes guidelines on topics such as legal, professional, organisational and individual responsibilities when managing records. It also advises on how to design and implement a records management system including advice on organising, storing, retaining and deleting records.

The Code is accompanied by a number of important appendices:

- Appendix I information on public inquiries
- Appendix II a retention schedule for different types of records
- Appendix III detailed advice on managing different types and formats of records such as integrated care records and staff records.

All organisations and managers need to enable staff to conform to the standards in this Code. This includes identifying organisational changes or other requirements needed to meet the standards, for example the people, money and correct tools required. Information Governance performance assessments, such as the <u>Data Security and Protection Toolkit</u> hosted by NHS Digital, and your own organisation management arrangements will help you identify any necessary changes to your current records management practices. Those who have responsibilities for monitoring overall performance, for example NHS England and NHS Improvement and the <u>Care Quality Commission</u> (CQC), help ensure effective management systems are in place e.g. by inspecting sites as part of their Key Lines of Enquiry and Statutory Powers.

| 5

The guidelines in this Code draw on published guidance from The National Archives (TNA) and best practice in the public and private sectors. It is informed by lessons learnt and it will help organisations to implement the recommendations of the Mid Staffordshire NHS Foundation Trust Public Inquiry relating to records management and transparency.

This Code must also be read in conjunction with the following:

- Academy of Medical Royal Colleges' standards for the clinical structure and content of patient records
- Professional Records Standards Body (PRSB) Structure and content of health and care records standards
- Lord Chancellor's Code of Practice on the management of records issued under section 46 of the Freedom of Information Act 2000 (FOIA). The National Archives (TNA) has commenced work on revising this code and will issue an update in due course.

This 2020 revision was conducted by NHSX with input from The National Archives and NHS England and NHS improvement. It is intended to be a lighttouch review. The Code replaces previous guidance listed below:

- Records Management: NHS Code of Practice: Parts 1 and 2: 2006, revised 2009 and 2016
- HSC 1999/053 For the Record managing records in NHS Trusts and health authorities
- HSC 1998/217 Preservation, Retention and Destruction of GP General Medical Services Records Relating to Patients (Replacement for FHSL (94) (30))
- HSC 1998/153 Using Electronic Patient Records in Hospitals: Legal **Requirements and Good Practice**

Standards and practice covered by the Code will change over time, so this document will be reviewed and updated as necessary. In particular, the following should be noted:

- At the time of writing there are a number of on-going inquiries including the Independent Inquiry into Historic Child Sex Abuse (IICSA) and the Infected guidance is issued by the relevant Inquiry. Future inquiries may lead to specific records management requirements. If that happens we will publish additional guidance on our website.
- We are proposing to undertake a review into the retention time for dea GP practice but have not needed to receive care. If a patient has moved to another practice the record would be sent to the new provider. However, if the reason for de-registration is unknown the electronic record is printed off and sent in paper form to NHS England. We are proposing to review the retention time for de-registered GP records to ensure that the significant costs of retaining the records for 100 years is justified by the benefits they bring. We will look for example at how many records are recalled and what the reasons are. We will aim to complete the review by the end of 2023.

Blood Public Inquiry (IBI). This means that records must not be destroyed until

7

registered GP records. De-registered refers to when a patient is no longer on the GP practice system. It does not refer to patients who are still registered at

Scope of the Code

1.1 OVERVIEW

This section explains the legal definition of a record and the types of records in scope of the Code.

1.2 WHAT IS A RECORD

There are a couple of definitions of a record, which are useful to highlight. The ISO standard ISO 15489-1:2016 defines a record as:

'Information created, received, and maintained as evidence and as an asset by an organisation or person, in pursuance of legal obligations or in the transaction of business."

Section 205 of the Data Protection Act 2018 (DPA18) defines a health record as a record which:

- Consists of data concerning health, and
- Has been made by or on behalf of a health professional in connection with the diagnosis, care or treatment of the individual to whom the data relates

1.3 SCOPE OF RECORDS COVERED BY THE CODE

The guidelines in this Code apply to NHS and Adult Social Care records (where they are integrated with NHS patient records). This includes:

- Records of patients treated by NHS organisations
- Records of patients treated on behalf of the NHS in the private healthcare sector
- Records of private patients treated on NHS premises
- Adult Service User Records where there is integration with health services e.g. jointly held records and Local Health and Care Records
- Records held by local authorities such as public health records, contraceptive and sexual health service records
- Staff Records
- Complaints Records
- Corporate Records administrative records relating to all functions of the organisation

The Code does not cover children's social care records. These are within the remit of the Department for Education, rather than the Department for Health and Social Care.

Whilst not strictly covered by this guide, private providers can also use this Code for guidance in relation to their records management. The Private and Voluntary Health Care (England) Regulations 2001 provide a legal framework for private providers to manage their records.

9

1.4 TYPE OF RECORDS COVERED BY THE CODE

The guidelines apply regardless of the media on which the records are held. Usually these records will be on paper or digital. However, some specialties will include physical records, such as physical moulds made from Plaster of Paris (refer to Appendix III).

Examples of records that should be managed using the guidelines in this Code include:

- Health and care records
- Registers e.g. birth, death, Accident and Emergency, Theatre, minor operations
- Administrative records for example, personnel, estates, financial and accounting records, notes associated with complaint-handling
- X-ray and imaging reports, output and images
- Secondary uses records (i.e. records that relate to uses beyond individual care) e.g. records used for service management, planning, research

Examples of record formats that should be managed using the guidelines from this code:

- Digital
- Paper
- Photographs, slides, and other images
- Microform (i.e. microfiche/microfilm)
- Physical records (records made of physical material such as plaster, gypsum and alginate moulds)
- Audio and video tapes, cassettes, CD-ROM etc
- E-mails
- Computerised records
- Scanned records
- Text messages (SMS) and social media (both outgoing from the NHS and incoming responses from the patient/service user) such as Twitter and Skype
- Metadata added to, or automatically created by, digital systems when in use. Content can sometimes be of little value if it is not accompanied by relevant metadata.
- Websites and intranet sites that provide key information to patients/service users and staff

Appendix III provides further details about managing specific types of records e.g. complaints records.

Records Management Obligations

2.1 OVERVIEW

All health and care employees are responsible for managing records appropriately. Records must be managed in accordance with the law. Health and care professionals also have professional responsibilities for example complying with the Caldicott Principles and records keeping standards set out by registrant bodies. Whilst every employee has individual responsibilities, each organisation should have a designated member of staff who leads on records management. Each organisation should also have a policy statement on records management, which is made available to staff through induction and training. Organisations may be asked for evidence to demonstrate they operate a satisfactory records management regime.

2.2 LEGAL OBLIGATIONS

Public Records Act 1958 and Local Government Act 1972

The <u>Public Records Act 1958</u> is the principal legislation relating to public records. Records of NHS organisations are public records in accordance with Schedule 1 of the Act. This means that employees are responsible for any records that they create or use in the course of their duties. This includes records controlled by NHS organisations under contractual or other joint arrangements, or as inherited legacy records of defunct NHS organisations. The Act applies regardless of the format of the records. The Secretary of State for Health and Social Care and all NHS organisations have a duty under the Act to make arrangements for the safekeeping and eventual disposal of all types of records. This is carried out under the overall guidance and supervision of the Keeper of Public Records who reports annually on this to parliament.

Public Health and social care records, where a local authority is the provider (or the provider is contracted to provide services to a local authority), must be managed in accordance with the requirement to make proper arrangements under Section 224 of the Local Government Act 1972. This states that proper arrangements must be in place with respect to any documents that belong to or are in the custody of the council or any of their officers.

Where health and social care records are created as a joint record, or part of a system whereby local health and care organisations can see the records of other local health and care organisations, then these records would be managed in line with the requirements of the Public Records Act 1958.

The <u>NHS Standard Contract</u> notes a contractual requirement on organisations, which are not bound by either the Public Records Act 1958 or the Local Government Act 1972, to manage the records they create. There are also statutory requirements affecting both private and voluntary care providers as set out in the <u>Private and Voluntary Health Care Regulations 2001</u>.

Freedom of Information Act 2000

The Freedom of Information Act (FOIA) governs the management of public records. The FOIA was designed to create transparency in government and allow any citizen to know about the provision of public services through the right to submit a request for information. This right is only as good as the ability of those organisations to supply information through good records management programmes. Records managers should adhere to the code of practice on record keeping issued by the Secretary of State for Culture, Media and Sport, under section 46 of the FOIA. The section 46 Code of Practice is used as a statutory statement of good practice by the regulator and the courts.

Data Protection Act 2018

The <u>DPA18</u> supplements the EU GDPR in UK law. It is the principal legislation governing how records, information and personal data are managed. It sets in law how personal and special categories of information may be processed. The <u>DPA18 principles</u> are also relevant to the management of records. Under the DPA18 organisations may be required to undertake Data Protection Impact Assessments as set out in Section 3 of this Records Management Code.

Health and Social Care Act 2008

Regulation 17 under the Health and Social Care Act 2008 requires that health and care providers must securely maintain accurate, complete and detailed records for patients/service users, employment of staff and overall management. The CQC are responsible for regulating this and have issued guidance on regulation 17. CQC may have regard to the Code when assessing providers' compliance with this regulation.

Other relevant legislation

Other legislation requires information to be held as proof of an activity against the eventuality of a claim. Examples of legislation include the Limitation Act 1980 or the Consumer Protection Act 1987. The Limitation Act sets out the length of time you can bring a legal case after an event and sets it at six years; this forms the basis for some of the retention periods set out in Appendix II.

2.3 PROFESSIONAL OBLIGATIONS

Staff who are registered to a Professional body, such as the General Medical Council (GMC), Nursing and Midwifery Council (NMC) or Social Work England will be required to adhere to record keeping standards defined by their registrant body. This is designed to guard against professional misconduct and to provide high quality care in line with the requirements of professional bodies.

The Academy of Medical Royal Colleges (AoMRC) generic medical record keeping standards were prepared for use in the NHS, primarily in acute settings but the standards are useful for all health and care settings. The AoMRC notes that a medical record, whether paper or electronic, must adhere to certain record keeping standards. The Royal College of Nursing has produced guidance on abbreviations and other short forms in patient/client records.

Further information about professional standards for records can be obtained from your relevant professional body. The main standard setting bodies in health and social care in England are:

- Academy of Medical Royal Colleges
- British Medical Association
- General Medical Council
- Health and Care Professions Council
- Nursing and Midwifery Council
- Royal College of General Practitioners
- Royal College of Nursing
- Royal College of Obstetricians & Gynaecologists
- <u>Royal College of Pathologists</u>
- Royal Pharmaceutical Society
- Royal College of Physicians
- Social Work England
- Data Co-ordination Board

Records Management Obligations

2.4 MANAGEMENT RESPONSIBILITIES

Caldicott Principles

The <u>Caldicott principles</u> outline seven areas that all health and social care staff are expected to adhere to in addition to the DPA18.

Care Records Guarantee/Social Care Record Guarantee

To help underpin the Caldicott principles, the <u>Care Records Guarantee</u> and the <u>Social Care Record Guarantee</u> outline in more detail how patient/service user information may be used by health or care services and what these organisations will do to keep information confidential.

Records management should be recognised as a specific corporate responsibility within every organisation. It should provide a managerial focus for records of all types in all formats throughout their lifecycle, from creation through to ultimate disposal. The records management function should have clear responsibilities and objectives and be adequately resourced to achieve them.

A designated member of staff of appropriate seniority should have lead responsibility for records management within the organisation. This could be a Care Home Manager/Practice Manager or in a larger organisation a staff member reporting directly to a Board member. This lead role should be formally acknowledged and communicated throughout the organisation. It is essential that the manager(s) responsible for the records management function is directly accountable to, or works in close association with, the manager(s) responsible for other information governance work areas.

As records management activities are undertaken throughout the organisation, mechanisms must be in place to enable the designated corporate lead to exercise an appropriate level of management of this activity, even where there is no direct reporting line. This might include cross-departmental records and information working groups or individual information and records champions/ coordinators, who may also be information asset owners.

All staff, whether working with clinical or administrative records, must be appropriately trained so that they are competent to carry out their designated duties and fully aware of their personal responsibilities in respect of record keeping and records management. No patient/service users' records or systems should be handled or used until training has been completed. Training must include the use of electronic records systems and it should be done through generic and/or organisation-wide training programmes, which can be department or context specific. Training should be complemented by organisational policies, procedures and guidance documentation.

2.5 ORGANISATIONAL POLICY AND STRATEGY

Each organisation must have an overall policy statement on how it manages all of its records. This statement must be endorsed by the operational management team, Board (or equivalent), and made available to all staff at induction and through regular updates and training.

The policy statement should provide a mandate for the performance of all records and information management functions. In particular, it should set out an organisational commitment to create, keep and manage records and document its principal activities in this respect. The policy should also:

- Outline the role of records management within the organisation and its relationship to the organisation's overall strategy
- Define roles and responsibilities within the organisation, including the responsibility of individuals to document their actions and decisions in the organisation's records and to dispose of records appropriately when they are no longer required
- Assign responsibility for the arrangements for records appraisal (required by ٠ section 3 (1) of the Public Records Act 1958)
- Provide a framework for supporting standards, procedures and guidelines and regulatory requirements (such as CQC and the NHS Digital hosted Data Security and Protection Toolkit)
- Indicate the way in which compliance with the policy and its supporting standards, procedures and guidelines will be monitored and maintained
- Provide the mandate for final disposal of all information by naming the committee or group that oversees the processes and procedures
- Provide instruction on meeting the records management requirements of the FOIA, the DPA18 and the Environmental Information Regulations 2004

The policy statement should be reviewed at regular intervals (at least once every two years) and if appropriate should be amended to maintain its relevance. The policy is also an important component of the organisation's information

governance arrangements and should be referenced in the organisation's Information Governance Management Framework.

Organisations must also conduct an annual survey to understand the extent of their records management responsibilities and to help inform future work-plans. It will aid organisations to know:

- What series of records it holds (and potential quantities)
- The format of its records
- The business area that created the record (and potential Information Asset Owner)
- Disposal potential for the coming year

Information Asset Management systems may support this process. They can help identify where records are held and whether they are being held under the correct security conditions, and in the case of health and care records, remain confidential. The process can also be used as an opportunity for asset owners to identify how long their records need to be held. The process will identify business critical assets and ensure that there are adequate business continuity measures in place to assure access.

2.6 MONITORING RECORDS MANAGEMENT PERFORMANCE

Organisations may be asked for evidence to demonstrate they operate a satisfactory records management regime. There is a range of sanctions available if satisfactory arrangements are not in place. Sanctions vary in their severity for both organisations and the individual. They may include:

- Formal warning
- Professional de-registration temporary suspension or permanent
- Regulatory intervention leading to conditions being imposed upon an organisation, or monetary penalty issued by the ICO

Organising Records

3.1 OVERVIEW

As set out in section two, each organisation must have a policy and strategy for managing records. This section describes how to design and implement a records management scheme including deciding what a record is and organising records. It includes information about the importance of metadata and security classifications.

3.2 DESIGNING A RECORDS KEEPING SYSTEM

The records lifecycle, or the information lifecycle, is a term that describes a controlled regime in which information is managed from the point that it is created to the point that it is either destroyed or permanently preserved as being of historical or research interest.

A records management system should cover each stage of the lifestyle:

Creation; Using; Retention; Appraisal; Disposal

Designing and Implementing Record Keeping Systems (DIRKS) is a manual which led to the creation of ISO 15489-1:2016 Information and documentation -Records Management. This standard, published by the International Organization for Standardization (ISO), focuses on the business principles behind records management and how organisations can establish a framework to enable a comprehensive records management programme. The standard is an eight-stage process and can be summarised as:

- 1. Conduct preliminary investigation
- 2. Analyse business activity
- 3. Identify requirements for records
- 4. Assess existing systems
- 5. Identify strategies to satisfy requirement
- 6. Design records system
- 7. Implement records systems
- 8. Conduct post implementation review

The standard also describes the characteristics of a record.

Record characteristic	How to evidence
Authentic	It is what it purports (claims) to be
	To have been created or sent by the person purported to have created or sent it
	To have been created or sent at the time purported.
Reliable	Full and accurate record of the transaction/activity or fact
	Created close to the time of transaction/activity
	Created by individuals with direct knowledge of the facts or by instruments routinely involved in the transaction/activity
Integrity	Complete and unaltered
	Protected against unauthorised alteration
	Alterations after creation can be identified as can the person making the changes
Useable	Located, retrieved, presented and interpreted
	Context can be established through links to other records in the transaction/activity

These characteristics allow strategies, policies and procedures to be established that will enable records to be authentic, reliable, integral and usable throughout their lifecycle.

There are a series of other British and international standards that are used to produce record keeping systems. These all interrelate and work within the same guiding principles and where possible use the same terminology. They all rely upon defining roles and responsibilities, processes, measurement, evaluation, review and improvement.

3.3 CONDUCTING A DATA PROTECTION IMPACT ASSESSMENT

Under GDPR, organisations are required to conduct Data Protection Impact Assessments (DPIAs) where there is new or a change in the use of personal data (<u>A DPIA template can be found on the ICO website</u>). Some uses require a mandatory DPIA but where processing is large scale, or introduces new technologies, it is recommended to complete a DPIA. If you are looking to establish a new records management function, then it will be vitally important to complete a DPIA. This will highlight potential risks to privacy and data protection, allowing you to action, mitigate or eliminate that risk. This must be conducted prior to any processing being carried out. Where you are looking to amend a records function, you should check with your Data Protection Officer first. DPIA completion in this circumstance will depend on the amendment/s you are looking to make. For example, if you intend to add three racking shelves for paper HR files to the existing twenty shelves you would probably not complete a DPIA. If you were looking to send your records offsite for scanning or destruction you must complete a DPIA.

3.4 DECLARING A RECORD

Within the record keeping system, there must be a method of deciding:

- What is a record
- What needs to be kept

This process is described as 'declaring a record'. A record can be declared at the point it is created or it can be declared at a later date. The process of declaring a record must be clear to staff. A declared record is then managed in a way that will fix it in an accessible format until it is appraised for further value or disposed of, according to retention policy that has been adopted. Some activities will be pre-defined as a record that needs to be kept, such as clinical records. Other records will need to fulfil the criteria as being worth keeping, such as unique instances of a business document or email.

Declared records can be held in the 'business as usual' systems or they can be moved into a protected area such as an Electronic Document and Records Management System (EDRMS) depending on the record keeping system in use. Organisations' teams should only hold locally the records they need to conduct business.

Records and information relating to closed cases may be kept locally for a short period of time (such as a year). This is in case a patient/service user re-presents or is re-referred. After that time, they should be moved to long-term storage for the rest of their retention period. For electronic records, a system may already be set up whereby records no longer required for current business are stored (such as a dedicated network drive or space on a drive). Records should be moved there keeping operational space free for current cases/work. This will also restrict unnecessary access to non-current personal/sensitive data. Your organisation's records management policy should cover what you need to do locally in this circumstance.

Key legislation, such as the DPA18 or FOIA, applies to all recorded information of the types covered by these Acts, whether declared as a formal record or not. However, declaration makes it easier to manage information in accordance with the legislation and business needs. Requests for information made under this legislation are easier to find in a logical filing system. Accumulations of informally recorded information, which can be difficult to find should therefore be minimised.

3.5 ORGANISING RECORDS

Record keeping systems must have a means of physically arranging or organising records. This is often referred to as a file plan or business classification scheme. In its most basic form a business classification scheme is a list of activities (e.g. finance or HR) arranged by business functions; however, it is often linked to an organisation's hierarchical structure.

Records should be arranged into a classification scheme, as required by ISO 15489 and the Lord Chancellor's Code of Practice. At the simplest level, the business classification scheme can be anything from an arrangement of files and folders on a network to an EDRMS. The important element is that there is an organised naming convention, which is logical, and can be followed by all staff. The scheme can be designed in different ways. Classification schemes should try to classify by function first. Once a recommended functional classification has been selected, the scheme can be further refined to produce a classification tree based on function, activity and transaction.

For example:

- Function: Corporate governance
- Activity: Board minutes and associated papers
- Transaction: April 2018-March 2019

The transaction can then be assigned a rule (such as retention period) a security status or other action based on the organisational policy. The scheme will enable appropriate management controls to be applied and support more accurate retrieval of information from record systems.

25

3.6 USING METADATA TO ORGANISE AND FIND RECORDS

Metadata is 'data about data' or structured information about a resource. The Cabinet Office e-Government Metadata Standard states that:

'metadata makes it easier to manage or find information, be it in the form of webpages, electronic documents, paper files or databases and for metadata to be effective, it needs to be structured and consistent across organisations'

The standard sets out 25 metadata elements, which are designed to form the basis for the description of all information. The standard lists four mandatory elements of metadata that must be present for any piece of information. A further three elements are mandatory if applicable and two more are recommended.

Mandatory elements	Mandatory if applicable	Recommended
Creator	Accessibility	Coverage
Date	Identifier	Language
Subject	Publisher	
Title		

The following provides a practical example of the metadata standard being used to produce a label to be placed on the side of a box of paper records, which are ready to archive.

Box label	Local interpretation	Metadata standard
Tiverton Community NHS	Accessibility	Coverage
Trust	Organisation Name	Creator
Midwifery	Service Name	Creator
Patient case records		
surname A-F	Description of record	Subject/Title
2000	Date/year of discharge	Date
2025	Date/year of destruction	Date

Where there is sufficient metadata it can be possible to arrange records by their metadata alone however a business classification scheme would always be recommended. Records arranged by their metadata rather than into a classification scheme often lack 'context'. This reduces the ability to produce an authentic record. Finding records arranged in this way is often reliant on a powerful search tool used to 'mine' the data or use a process called 'digital archaeology'. This is not recommended because it is so time-consuming to determine authenticity but it has been included in this Code as legacy record keeping systems may not have been organised logically.

27

3.7 APPLYING SECURITY CLASSIFICATIONS

In addition to any metadata needed to manage information through the information lifecycle, all information should possess a security classification. Both central government and local government use the Cabinet Office Government Security Classifications defined protective marking scheme. It applies to all information that the Government collects, stores, processes, generates or shares to deliver services and conduct business, including information received from or exchanged with external partners. The NHS uses a variation of this scheme. Under the NHS Protective Marking Scheme 2014 patient data is classed as 'NHS Confidential'. This is equivalent to 'Official Sensitive' in the Cabinet Office Government Security Classifications.

Records Storage for operational use

4.1 OVERVIEW

This section covers how to store records for operational use. It includes considerations relating to both paper and digital records including the challenge of ensuring digital records remain authentic and usable over time and the management of off-site storage.

4.2 MANAGEMENT AND STORAGE OF PAPER RECORDS

The original paper record guarantees the authenticity of the record but can make it hard to audit access to the record, depending on where this is stored, because paper records do not have automatic audit logs.

4.3 MANAGEMENT AND STORAGE OF DIGITAL RECORDS

Digital information must be stored in such a way that, throughout its lifecycle, it can be recovered in an accessible format in addition to providing information about those who have accessed the record, as required by the Care Records Guarantee / Social Care Records Guarantee.

The European Commission has produced an overarching standard in this area. (Further information is available on the <u>DLM forum foundation</u>). The authenticity of a record is dependent on a number of factors:

- Sufficient metadata to allow it to remain reliable, integral and usable (refer to section 3)
- The structure of the record
- The business context
- Links between other documents that form part of the transaction the record relates to

The management of digital records requires constant, continual effort, and should not be underestimated. Failure to maintain effort with digital records can result in doubt being raised over the authenticity of the digital image. Examples include:

- format loses integrity
- do not migrate to newer media cannot be said to be complete or integral
- An email message that is not stored with the other records related to the transaction is not integral as there are no supporting records to give it context

Digital information presents a unique set of issues, which must be considered and overcome to ensure that records remain:

- Authentic
- Reliable
- Retain their integrity
- Retain usability

Digital continuity refers to the process of maintaining digital information in such a way that the information will continue to be available as needed despite advances in digital technology and the advent of newer digital platforms. Digital preservation ensures that digital information of continuing value remains accessible and usable.

The amount of work required to maintain digital information as an authentic record must not be underestimated. For example, the information recorded on an electronic health record system may need to be accessible for decades (including an audit trail to show lawful access and maintain authenticity) to support continuity of care. Digital information must not be left unmanaged in the hope a file can be used in the future. TNA has produced a variety of

• A record with web links that do not work once they are converted to another

• A record with attachments, such as hyperlinks or embedded documents, that

technical and role-based guidance and useful checklists to support this management process.

As there are no digital records in existence today that are of such an age, it is difficult to even plan continued access in an authentic form over such a timeframe. For example:

- Paper records can deteriorate over time so can electronic media as the magnetic binary code can de-magnetise in a process called 'bit rot' leading to unreadable or altered information, thus reducing its authenticity
- Software upgrades can leave other applications unusable as they may no longer run on updated operating systems
- Media used for storage may become obsolete or degrade, and the technology required to read them may not be commercially available
- File formats become obsolete over time as more efficient and advanced ones are developed

There are several strategies that can be adopted to ensure that digital information can be kept in an accessible form over time. Among the most common strategies adopted are:

- Emulation (using software to simulate the original application)
- Preservation of host system
- Conversion to a standard file format (or a limited number of formats)
- Migration to new system (retaining existing formats)

The Digital Preservation Coalition has produced a handbook that will help organisations understand some of the issues associated with retaining digital records for long periods of time.

The UK Government National Cyber Security Centre (NCSC) provides good practice guidelines on Forensic Readiness and defines it as:

'the achievement of an appropriate level of capability by an organisation in order for it to be able to collect, preserve, protect and analyse digital evidence so that this evidence can be effectively used in any legal matters, in security investigations, in disciplinary matters, in an employment tribunal or in a court of law'.

The NCSC notes that

'it is important for each organisation to develop a forensic readiness of sufficient capability and that it is matched to its business need'.

Forensic readiness involves:

- Specification of a policy that lays down a consistent approach to electronic records
- Detailed planning against typical (and actual) case scenarios
- Identification of (internal or external) resources that can be deployed as part of those plans
- Identification of where and how the associated digital evidence can be gathered that will support case investigation
- A process of continuous improvement that learns from experience

In many organisations, Forensic Readiness is managed by information security or informatics staff, but records managers need to ensure that they input to policy development and feed in case scenarios as necessary.

4.4 MANAGING OFFSITE RECORDS

It is vital to highlight the importance of actively managing records stored offsite. This applies to both paper records and records stored in cloud-based solutions (refer to Appendix III for further information about cloud-based records). Managing off-site records effectively will ensure that:

- There is a full inventory of what is held offsite
- Retention periods are applied to each record
- A disposal log is kept
- There is evidence of secure disposal of records and information

The current guidance to identify and support the requirements for <u>offsite</u> <u>storage of physical records</u> is issued by TNA. It is a best practice benchmark for all organisations creating or holding public records and provides advice and guidance on the tracking of records at all stages of the information life cycle up to disposal.

You must conduct a DPIA if you are looking to start storing records offsite. A DPIA must be completed:

- At the outset of entering an offsite storage contract
- If you have not completed one before on the service (even if it has been established for a number of years)
- If you change Service Provider
- If you change how you manage your contract or elements of it (e.g. change from destruction by pulping to destruction by shredding)
- If you end the service by bringing it in-house

The Data Controller must action all processing of offsite records. It is good practice for the storage provider to inform the organisation of time expired records that need to be disposed of (providing they were accessioned correctly with retention dates). The organisation can then appraise the record/s for disposal and provide instruction for continued storage, secure, evidenced destruction or transfer to the local Place of Deposit.

If offsite storage is currently operated by your organisation it may be worth conducting a DPIA to ensure current measures guard against risks to privacy. A DPIA is also evidence of due diligence, providing the outcomes are actioned. The TNA has produced <u>further guidance</u> on identifying and specifying requirements for offsite storage of physical records. The TNA does not provide guidance on onsite storage of operational and live records. This should be determined by the local organisation in line with this Code.

Management of records when the minimum retention period is reached

5.1 OVERVIEW

This section covers the management of records once their business need has ceased and the minimum retention period has been reached. A detailed retention schedule is set out in Appendix II. This section includes information on the destruction and deletion of records; reviewing records for continued retention once their minimum period for retention has expired; and the selection of records for permanent preservation. It also includes information and advice about the transfer of records to Place of Deposits (PoD). Appendix I relating to public Inquiries should also be considered before destroying any records.

5.2 APPRAISAL

Appraisal is the process of deciding what to do with records once their business need has ceased and the minimum retention period has been reached. This can also be known as the disposition of records. TNA has produced guidance on appraisal.

Appraisal must be defined in a policy and any decisions must be documented and linked to a mandate to act (derived from the Board). Any changes to the status of records must also be reflected in your organisation's Record of Processing Activity. In no circumstances should a record or series be automatically destroyed or deleted.

Electronic records can be appraised if:

- They are arranged in an organised filing system
- They can differentiate the year of creation
- They can be organised by year of closure
- The subject of the record is clear

If electronic records have been organised in an effective file plan or an electronic record keeping system, this process will be made much easier. Decisions can then be applied to an entire class of records rather than reviewing each record in turn.

There will be one of three outcomes from appraisal:

- Destroy / delete
- Continued retention this will require justification and documented reasons
- Permanent Preservation

5.3 DESTROYING AND DELETING RECORDS

If as a result of appraisal a decision is made to destroy or delete a record, there must be evidence of the decision. It is good practice to get authorisation for destruction or deletion from an appointed committee or group with a designated function to appraise records, working to a policy or guidelines. Where the destruction or deletion process is new, or there is a change in the destruction process (such as a change of provider, or the method used), a DPIA must be completed and signed off by the organisation.

Destruction of Paper Records

Paper records selected for destruction can be destroyed, subject to following <u>ISO</u> <u>15489-1:2016</u>. Destruction can be conducted in-house or under contract with an approved offsite company. If an offsite company is used, the health or care organisation, as the data controller, is responsible for ensuring the provider chosen to carry out offsite destruction meets the necessary requirements and can evidence this. This evidence should be checked as part of due diligence (e.g. if the provider says they have the ISO accreditation, then check with the <u>ISO</u>). Other diligence activities, such as a site visit to the contractor, should also be carried out. Destruction provider companies must provide a certification of destruction for the bulk destruction of records. This certification must be linked to a list of records so organisations have clear evidence that particular records have been destroyed.

Records that do not contain personal data or confidential material can be destroyed in a less secure manner (such as confidential waste bins that do not provide certificates of destruction). If in doubt, material should be treated as confidential and evidentially destroyed. Do not use the domestic waste or put records on a rubbish tip to destroy identifiable and/or confidential material, because they remain accessible to anyone who finds them. The British Security Industry Association (BSIA) has provided a <u>guide</u> on information destruction.

Destruction of Digital Records

Destruction implies a permanent action. For digital records 'deletion' may be reversed and may not meet the standard as the information can/may be able to be recovered or reversed. Destruction of digital information is therefore more challenging. If an offsite company is used, the health and care organisation as the data controller should check with the ISO whether the provider meets the necessary requirements, similar to the process for the destruction of paper records.

One element of records management is accounting for information, so any destruction of hardware, hard drives or storage media must be auditable in respect of the information they hold. An electronic records management system will retain a metadata stub, which will show what has been destroyed.

The ICO guidance **Deleting Personal Data** sets out that if information is deleted from a live environment and cannot be readily accessed then this will suffice to remove information for the purposes of the DPA18. Their advice is to only procure systems that will allow permanent deletion of records to allow compliance with the law.

In relation to FOIA, the ICO guidance **Determining whether information is held** advises that once the appropriate limit for costs incurred for that FOI has been reached, there are no more requirements to recover information held. The only exemption to this would be where the organisation is instructed by a court order.

The following are examples of when information cannot be destroyed or disposed of:

- If it is subject to a form of access request (e.g. Subject Access Request, FOIA request)
- If it is required for notified legal proceedings (e.g. court order), or where court case), as this information will possibly be required for the exercising or defending of a legal right or claim
- If it is required for a Coroner's Inquest
- If it is of interest to a Public Inquiry (who will issue guidance to organisations on what kind of records they may require as part of the Inquiry. Once notified, organisations can re-commence disposal, taking into account what records are required by the Inquiry. If in doubt, check with the Inquiry Team)

there is reasonable prospect of legal proceedings commencing (an impending

5.4 CONTINUED RETENTION

The retention periods given in Appendix II are the minimum periods for which records must be retained for health and care purposes. In most cases, it will be appropriate to dispose of records once this period has expired, unless the records have been selected for permanent preservation.

Organisations must have procedures and policies for any instances where it is necessary to maintain records for longer than the stated minimum, including:

- Temporary retention
- Public Inquiries
- Ongoing access request (e.g. where the ongoing processing of an access request cuts over the minimum retention period. It would not be acceptable to dispose of a record that is part way through being processed for an access request because the minimum retention period has been reached)
- Where there is a continued business need beyond the minimum retention period, and this is documented in local policy

Where records contain personal data, the decision to retain must comply with the DPA18 principles. Decisions for continued retention beyond the periods laid out in this Code must be recorded, made in accordance with formal policies and procedures by authorised staff and set a specific period for further review.

Generally, where there is justification, records may be retained locally from the minimum period set in this Code, for up to 20 years from the last date at which content was added. For records that have a recommended retention period beyond 20 years, e.g. maternity records, these can be retained for longer as specified in Appendix II, in this case for 25 years.

<u>Retention Instrument 122</u> has been approved by the Secretary of State for Digital, Culture, Media and Sport to permit extended retention of NHS individual staff and patient records up to 20 years where this is necessary for continued NHS operational use or where an extended period beyond this is mandated by the Code (such as with the maternity records). Where organisations use the provisions of the Instrument to extend retention, this must be documented in published policies. TNA website has details of the retention instruments currently in force.

Retention beyond 20 years (except where the recommended retention period as stipulated in Appendix II is longer), requires the approval of the Secretary of State for Digital, Culture, Media and Sport. Applications for approval should be made to TNA in the first instance (asd@nationalarchives.gov.uk). It must be remembered that, in some cases of health and social care, there may be gaps between episodes of care. If a patient/service user begins a new episode of care whilst their previous record is still within agreed retention periods, then these episodes of care will link, and the retention period will begin again at the end of the current episode. This may mean that some or all of the information from the previous episode will go over a 20-year retention mark, but this is acceptable as it links to a more recent care episode.

Examples of the application of Retention Instrument 122

1. A Trust wishes to check the retention period for cancer/oncology records. The Code states 30 years so the records are retained for that period of time and this is covered by Retention Instrument 122, because the records are being retained in line with the guidance in this Code.

2. A Trust wishes to retain patient records for 16 years due to developments in the treatment of infectious diseases (where a patient is cared for in an isolation ward). The Code recommends eight years before disposal. The Trust can make a local decision to retain the records for 16 years. This does not need an application to TNA under RI122 because it is under 20 years. The decision is documented in the Trust's published policy. The Trust notes that retention beyond 20 years for these records would require approval from the TNA in the first instance and then approval from the Secretary of State.

Management of records when the minimum retention period is reached

5.5 RECORDS FOR PERMANENT PRESERVATION

The Public Records Act 1958 requires organisations to select records for permanent preservation. Selection for transfer under this Act is separate to the operational review of records to support current service provision. It is designed to ensure the permanent preservation of a small core (typically 2-5%) of key records, which will:

- Enable the public to understand the working of the organisation and its impact on the population it serves
- Preserve information and evidence likely to have long-term research or archival value

Records for preservation must be selected in accordance with the guidance contained in this Code, any supplementary guidance issued by TNA and local guidance from the relevant Place of Deposit (PoD), which should always be consulted in advance.

Selection may take place at any time in advance of transfer however the selection and transfer must take place at or before records are 20 years old. Records may be selected as a class (for example all board minutes) or at lower levels down to individual files or items.

Records can be categorised as follows:

- Transfer to PoD this class of records should normally transfer in its entirety to the PoD – trivial or duplicate items can be removed prior to transfer.
- Consider transfer to PoD all, some or none of this class may be selected (as agreed with the PoD).
- No PoD Interest

Other records should not normally be selected for transfer. Whilst there may be occasions where records to support research are transferred (e.g. to support research into rare conditions), records should not be transferred just because they relate to research. The Public Records Act 1958 is not designed to support the routine archival of research records; records should not be transferred unless they specifically meet the criteria below. If in doubt, it is recommended to check with the local PoD.

Where it is known that particular records will be transferred to PoDs routinely, this should be noted in the records management policy (or equivalent) alongside the reason for the routine transfer. Likewise, one-off transfers should also be noted for reference. It is not practical to update local policies each time a transfer is made. If a particular type becomes a regular transfer, this could be added to the next update of the records management policy. It may be sufficient to publish a link to the PoD's public catalogue and/or TNA's Discovery Catalogue to which data for transferred records is added annually. Where it is known a record will form part of the public record at creation, it must be preserved locally until such time it can be transferred. PoDs will know which types of records they will always take (such as Board minutes). TNA is working on providing guidance on which record will always be transferred, and those that might be of local interest.

The Tavistock and Portman NHS Foundation Trust has a policy for the selection of material for permanent archive: a method for selecting the works of eminent clinicians' work; and a panel for selecting historical records. Where a clinician has amassed a lifetime of research or important cases these may be identified and retained.

43

44

Patient/Service user records for permanent preservation

Records of individual persons may also be selected and transferred to the PoD provided this is necessary and proportionate in relation to the broadly historical purposes of the Public Records Act 1958 and PoD agreement. For example, individual patient files relating to a hospital that is now closed and the files are coming to the end of their retention. In West Yorkshire, a hospital, which opened in 1919, closed in 1995 and in 2011 patient files were still being transferred to the local PoD to finish the series. All patient records for the hospital are now at the PoD. Patient/service user confidentiality will normally prevent use for many decades after transfer and the physical resource will be substantial (e.g. x number of archive boxes) therefore the transfer of patient/ service users records should only be considered where one or more of the factors listed apply:

- The organisation has an unusually long or complete run of records of a given type
- The records relate to population or environmental factors peculiar to the locality
- The records are likely to support research into rare or long-term conditions
- The records relate to an event or issue of significant local or national importance
- The records relate to the development of new or unusual treatments or approaches to care and/or the organisation is recognised as a national or international leader in the field of medicine or care concerned
- The records throw particular light on the functioning, or failure, of the organisation, or the NHS or social care in general
- The records relate to a significant piece of published research

Any policy to select patient or service user records should only be agreed after consultation with appropriate clinicians, the Group or Committee responsible for records management and (if necessary), the Caldicott Guardian. This decision,

and the reasoning behind the decision, should be published in the minutes of the meeting at which this decision is taken. Routine transfers of patient/service user records to a PoD can be included in the Records Management policy of the organisation or its equivalent.

Any records selected should normally be retained within the NHS/social care (under the terms of Retention Instrument 122) until the patient/service user is deceased, or reasonably assumed to be so and then can subsequently be transferred. Records no longer required for current service provision may be temporarily retained pending transfer to a PoD. Records containing sensitive or confidential information should not normally be transferred early, unless in agreement with the PoD. If a patient/service user expresses a wish that they do not want their health or care record transferred to a PoD, this must be respected unless the transfer is required by law.

Transfers of Records to the Place of Deposit

Records selected for permanent preservation should be transferred to the relevant PoD appointed by the Secretary of State for Digital, Culture, Media and Sport. PoDs are usually public archive services provided by the relevant local authority. Current contact details of PoDs and the organisations which should transfer to them can be found on the TNA website. As a general rule, national Public Sector organisations will deposit with TNA, while local organisations will deposit with a local PoD, e.g. NHS England will deposit with TNA, whereas a local NHS body or local authority will deposit with the local Place of Deposit which could be the County Record Office, or a specialised facility run by local authorities for the county.

There will be a mandatory requirement to transfer some types of records whereas others will be subject to local agreement. The retention schedule included with this Code identifies records, which should be transferred to the locally approved PoD when business use has ceased. There may also be records of local interest, which need to be accessioned to the PoD (such as a continuation of a series already accessioned. Prior to any transfer being made, a discussion must be had with the local PoD to enable agreement on which records will be transferred and the process for doing so. (Also refer to Appendix I, which provides information about public inquiries that may impact upon the selection of records for transfer).

Transferred records should be in good condition and appropriately packed, listed and reviewed for any FOIA exemptions. Records selected for transfer to a PoD (after appraisal) may continue to be exempt from public access for a specified period after transfer in accordance with Section 66 of FOIA. For more detail on the transfer process and sensitivity review refer to TNA guidance.

Requests to access records held in the Place of Deposit

Once transferred to the PoD, records will still be owned by the organisation transferring them and all relevant laws will apply. Individual records deposited with PoDs are still protected by the DPA18, FOIA and duty of confidentiality. Where records are kept for permanent preservation for reasons other than care, consideration should be given to preserving the records in an anonymised way to protect confidentiality. Where this is not possible, then consider removing as many identifiers as possible. If you are looking to preserve a record because the treatment provided was innovative or highlights new ways or working, then the identity of the patient is not required. For individual care, it would be required, as the record may need to be retrieved.

Where a local PoD holds records and access is requested, the PoD will liaise with the depositing organisation before releasing any information (including any checks for subject access requests required by DPA18 and any exemptions under FOIA). This allows for a check for any harmful information that may be in the record or if there are other grounds on which to withhold the record. Where a public interest test is required, the transferring organisation must carry this out and inform the PoD of the result. The depositing organisation must make a decision on what information to release and where information is withheld, explain the reason why (except in exceptional circumstances e.g. a court order to the PoD).

Unless there are exceptional circumstances, PoDs will not normally continue to apply FOI exemptions to records more than 100 years old.

Where a patient/service user has died the DPA18 no longer applies but FOIA applies regardless as to whether the individual is alive or not. The Section 41 (confidence) exemption of FOIA and the duty of confidence remain relevant so records cannot be accessed by anyone who does not have a lawful basis to view

a record. FOIA decisions indicate that, in general, health and social care information will remain confidential after death.

The duty of confidence does diminish over time but it is recommended that at least 10 years should have passed after a person's death before reviewing the consequences of relaxing disclosure controls on information about a person previously regarded as confidential. This review should consider the potential harm or distress to surviving family members of disclosing information that might be regarded as particularly sensitive or likely to attract publicity, and the risks that the disclosure might undermine public trust in the health and care system. When a person is deceased, the Access to Health Records Act 1990 may enable access to the health record for a limited purpose by specified individuals (i.e. those with a claim arising out of the Estate).

Management of records when the minimum retention period is reached

47

Appendix I: Public and Statutory Inquiries

Records form an important part of the evidence in Inquiries. Inquiries take into account a huge range of records and what is required can vary by Inquiry. When an Inquiry is conducted, the Inquiry Team will issue detailed guidance setting out what types of records they are interested in. If you have any records that an Inquiry requests, you must produce them or explain why you cannot produce them.

Before any records relating to inquiries are destroyed, you must check with the Inquiries Team that they are no longer required. If you are in doubt regarding records that may or may not be of use for an inquiry, you must retain them until there is clear instruction from the inquiry.

Before considering the selection of records for permanent preservation under the Public Records Act 1958 (refer to section 5), you should discuss any inquiries with the relevant PoD to take account of exceptional local circumstances and defunct record types not listed here.

At the time of writing there are two independent Inquiries which have requested that large parts of the health and social care sector do not destroy any records that are, or may fall into the remit of the Inquiry:

- <u>The Independent Inquiry into Child Sexual Abuse</u> (IICSA) Records that should not be destroyed include children's records and any instances of allegations or investigations or any records of an institution where abuse has or may have occurred
- The Infected Blood Inquiry Further information about the records required can be found on the <u>Inquiry website</u>

| 49

Appendix II: Retention Schedule

This Appendix sets out the retention period for different types of records relating to health and care. Where indicated Appendix III should also be referred to - this sets out further detail relating to the management of specific types and formats of records.

The following information is important to ensure the retention schedule is used correctly. The retention periods listed in this retention schedule must always be considered the **minimum period**. With justification a retention period can be extended, for the majority of cases, up to 20 years (refer to section five of the Code). For more information, refer to R v Northumberland County Council and the Information Commissioner (23 July 2015). This provides assurance that it is legitimate to vary common practice/guidance where a well-reasoned case for doing so is made.

Retention periods begin when the record ceases to be operational. This is usually at point of discharge from care, when the record is no longer required for current on-going business, or the patient/service user has died. There are some exceptions to this rule, whereby the retention begins from the date the record is created (for Corporate Records, such as policies, the retention may start from the date of publication). These are marked with an asterisk (*) in the schedule and may also contain further information in the notes for that entry.

If a record comes back into use during its retention period, then the retention period will reset and begin again from the end of the second period of use. This may mean that records will look as if they are being kept for longer than the retention times stated here, or even maximum periods as suggested by law, but this is acceptable where retention periods reset due to use (refer to section five of the Code).

The actions following review as set out in the schedule are as follows:

Review and destroy if no longer required – Destroy refers to the confidential and secure destruction of the record with proof of destruction.

Review and dispose of if no longer required – Dispose of refers to the secure destruction of a record OR the transferral to the appointed PoD for permanent preservation. A certificate of transfer will be provided as proof of transfer (and can act as evidence of disposal). Refer to section five of the Code for further information about permanent preservation.

Review and consider transfer to PoD – This refers to records that are more likely to be transferred to the PoD, subject to their agreement.

Review and transfer to PoD – This refers to records that should be transferred to the PoD.

it is very important that any health and care records are reviewed before they are destroyed. This review should take into account:

- Serious incidents which will require records to be retained for up to 20 years as set out in the schedule
- Use of the record during the retention period which could extend its retention
- Potential for long-term archival preservation. This may particularly be the case where the records relate to rare conditions such as Creutzfeldt-Jakob Disease records or innovative treatments e.g. new cancer treatments.

CARE RECORDS

Record Type	Retention Period	Disposal Action	Notes
Adult health records not covered by any other section in this schedule (includes medical illustration records such as X-rays and scans as well as video and other formats. Also includes care plans)	8 years	Review and consider transfer to PoD	Records involving pioneering or innovative treatment may have archival value. Also refer to Appendix III - ambulance service records.
Adult Social Care Records (including care plans)	8 years	Review and destroy if no longer required	
Children's records (including Midwifery, health visiting and school nursing) - can include medical illustrations, as well as video and audio formats.	Up to 25 th or 26 th birthday	Review and destroy if no longer required	Retain until 25 th birthday, or 26 if the patient was 17 when treatment ended.
Clinical Records that pre- date the NHS (July 1948)		Review and transfer to PoD	Contact your local PoD to arrange review and transfer. Records not selected by the PoD must be securely destroyed.

Record Type	Retention Period	Disposal Action	Notes
Electronic Patient Record Systems (EPR)	Refer to notes	Review and destroy if no longer required	Where the system has the capacity to destroy records in line with the retention schedule, <u>and</u> where a metadata stub can remain, demonstrating the destruction, then the Code should be followed in the same way for electronic as well as paper records, with a log kept of destructions. If the EPR does not have this capacity, then once records reach the end of their retention period, they should be made inaccessible to system users upon decommissioning. The system (along with the audit trails) should be retained for the retention period of the last entry related to the schedule.
General Dental Services records	6 years	Review and destroy if no longer required	This covers the period required by the Dental Contract and financial audit requirement. (It is recognised the Dental Services Contract states to retain records for 2 years. This issue is being looked into, with discussions taking place to change the Contract to reflect this Code).
GP Patient Records- deceased patients	10 years	Review and destroy if no longer required	Confidentiality generally ceases to apply after 10 years and retention covers requirements of the Limitation Act 1980. (Also refer to Appendix III - GP Records).

54 |

Records Management Code of Practice 2020

Record Type	Retention Period	Disposal Action	Notes
Obstetrics, Maternity, Antenatal and postnatal records	25 years	Review and destroy if no longer required	For record keeping purposes, these are considered to be as much the child's record as the parent, so the longer retention period should be considered.
Prison Health Records	10 years	Review and destroy if no longer required	A summary of their prison healthcare is sent to the person's new GP upon release and the record should be considered closed at the point of release. These records are unlikely to have long term archival value and should be retained by the organisations providing care in the Prison, or
			successor organisation/s if the running of the service changes hands.
Cancer/Oncology Records – any patient*	30 years, or 8 years after death	Review and consider transfer to PoD	Retention for these records begins at diagnosis rather than the end of operational use.
			For clinical care reasons, these records must be retained longer in case of re-occurrence. Where the oncology record is part of the main records, then the entire record must be retained.

Record Type	Retention Period	Disposal Action	Notes
Contraception/Sexual Health/Family Planning/ Genito-Urinary Medicine (GUM)	8 or 10 years	Review and destroy if no longer required	8 years for the basic retention requirement but this is increased to 10 in cases of implants or medical devices. If the record relates to a child, then retain in line with children's records. (Also refer to Appendix III - Records dealt with under the NHS Trusts and Primary Care Trusts (Sexually Transmitted Disease Directions 2000).
HFEA Records – Treatment provided in licenced centres	3, 10, 30 or 50 years	Review and destroy if no longer required	These retentions are set out in <u>HFEA</u> guidance.
Creutzfeldt-Jakob Disease – Patient Records	30 years or 8 years after death	Review and dispose of if no longer required	Diagnosis records must be retained for clinical care purposes.
Long-term illness, or illness that may reoccur – Patient records	20 years, or 8 years after death	Review and dispose of if no longer required.	Necessary for continuation of clinical care. The primary record of the illness and course of treatment must be kept where the illness may reoccur or it is a life-long condition.

PHARMACY

Record Type	Retention Period	Disposal Action	Notes
Information relating to controlled drugs*	See notes	Review and destroy if no longer required	NHS England has issued <u>guidance</u> stating that locally held controlled drugs information should be retained for seven years. <u>NHS BSA</u> will hold primary data for 20 years and then review it. (Also refer to Appendix III - Controlled Drugs).
Pharmacy Prescription Records	2 years	Review and destroy if no longer required	A record of the Prescription will also be held by NHS BSA and there will be an entry on the patient record.

PATHOLOGY

Record Type	Retention Period	Disposal Action	Notes
Pathology Reports/ Information about samples	Refer to notes	Review and consider transfer to PoD.	This Code is concerned with the information about a specimen or sample. The length of time clinical material (e.g. a specimen) is stored will drive how long the information relating to it is retained. Sample retention can be for as long as there is a clinical need to hold it. Reports should be stored on the patient file. It is common for Pathologists to hold duplicate records. For clinical purposes, these should be retained for eight years after discharge or until a child's 25th birthday. If information is retained for 20 years, it must be appraised for historical value, and a decision made about its disposal. (Also refer to Appendix III - specimens and samples).

| 59

EVENT AND TRANSACTION RECORDS

Record Type	Retention Period	Disposal Action	Notes
Blood Bank Register*	30 years minimum	Review and consider transfer to PoD	Need to be disposed of if there is no on-going need to retain them subject to any transfer to the PoD.
Clinical Audit*	5 years	Review and destroy if no longer required	Five years from the year in which the audit was conducted.
Chaplaincy Records*	2 years	Review and consider transfer to PoD	Refer also to Corporate Governance Records.
Clinical Diaries	2 years	Review and destroy if no longer required	Two years after the year to which they relate. Diaries of clinical activity and visits must be written up and transferred to the main patient record. If the information is not transferred from the diary (so the only record of the event is in the diary), then this must be retained for eight years and reviewed.
			Some staff keep hardback diaries of their appointments and/or business meetings. If these contain no personal data, they can be disposed of after two years.

Record Type	Retention Period	Disposal Action	Notes
Clinical Protocols*	25 years	Review and consider transfer to PoD	Clinical Protocols may have preservational value. They may also be routinely captured in clinical governance meetings, which may form part of the permanent record (refer to Corporate Governance Records
Datasets released by NHS Digital and its predecessors	Delete with immediate effect.	Delete in line with NHS Digital instructions	NHS Digital issue guidance through the DARS process on t retention and disposal of data released by them.
Destruction Certificates, or Electronic Metadata destruction stub, or Record of clinical information held on physical media	20 years	Review and consider transfer to PoD	Destruction Certificates created by public bodies are not covere by a retention instrument (if th do not relate to patient care) a if a PoD or TNA do not accessio them. They need to be destroy after 20 years.
Equipment Maintenance Logs	11 years	Review and destroy if no longer required	
General Ophthalmic Services – patient records related to NHS financial transactions	6 years	Review and destroy if no longer required	

Record Type	Retention Period	Disposal Action	Notes
GP temporary resident forms	2 years	Review and destroy if no longer required	This assumes a copy has been sent to the responsible GP for inclusion in the GP patient record.
Inspection of Equipment Records	11 years	Review and destroy if no longer required	
Notifiable Diseases Book*	6 years	Review and destroy if no longer required	
Dperating Theatre Records	10 years	Review and consider transfer to PoD	10 years from the end of the year to which they relate.
Patient Property Books	2 years	Review and destroy if no longer required	Two years from the end of the year to which they relate.
Referrals – NOT ACCEPTED	2 years	Review and destroy if no longer required	Retention period begins from the DATE OF REJECTION. These are seen as an ephemeral record.

Disposal Action	Notes	
Review and destroy if no longer required	Retention period begins from the DATE OF REJECTION. These are seen as an ephemeral record. NB: These may have potential PoD interest as what the NHS/social care can or cannot fund can sometimes be an issue of local or national significance and public debate. (Refer to Appendix III - Individual Funding Requests).	
Review and destroy if no longer required	Where Cancer is detected, refer to the Cancer/Oncology schedule.	
Review and destroy if no longer required	Treat as a child health record and retain for either 10 years or up to 25th birthday, whichever is the LONGER.	
Review and destroy if no longer required	Retention begins at the end of the 12-week quit period.	

TELEPHONY SYSTEMS AND SERVICES

This is related to 111/999 phone calls/services, Ambulance, Out of Hours, and Single Point of Contact Call Centres.

Record Type	Retention Period	Disposal Action	Notes
Recorded Conversations – which may be needed later for clinical negligence or other legal purposes*	6 years	Review and destroy if no longer required	Retention period runs from the date of the call and is intended to cover the Limitation Act 1980. Further guidance is issued by <u>NHS</u> <u>Resolution</u> .
Recorded Conversations – which form part of the health record*	Treat as a health record	Review and destroy if no longer required	It is advisable to transfer any relevant information into the main record, through transcription or summarisation. Call Handlers may perform this task as part of the call. Where it is not possible to transfer clinical information from the recording to the record, the recording must be considered as part of the record and be retained accordingly.
Telephony systems record*	1 year	Review and destroy if no longer required	This is the minimum specified to meet NHS Contractual Requirements.

Record Type	Retention Period	Disposal Action	Notes
Transplantation Records*	30 years	Review and destroy if no longer required	Refer to guidance issued by the <u>Human Tissue Authority</u> .
Ward Handover Sheets*	2 years	Review and destroy if no longer required	This information relates to the Ward. Any individual sheets held by staff may be destroyed confidentially at the end of the shift.

BIRTHS, DEATH AND ADOPTION RECORDS

Record Type	Retention Period	Disposal Action	Notes
Birth Notification to Child Health	25 years	Review and destroy if no longer required	Retention begins when the notification is received by the Child Health Department. Treat as part of the child's health record if not already stored within the health record.
Birth Registers*	2 years	Review and consider transfer to PoD	Where registers of all births that have taken place in a particular hospital/birth centre exist, these will have archival value and should be retained for 25 years and offered to the local PoD at the end of the retention period. Information is also held by the NHS Birth Notification Service
Body Release Forms*	2 years	Review	electronic system, and by ONS. Other information about a birth must be recorded in the care record.
		and destroy if no longer required	
Death – cause of death certificate counterfoil*	2 years	Review and destroy if no longer required	These would be a duplicate (possibly) of Coroner's records.

Record Type	Retention Period	Disposal Action	Notes
NHS Medicals for Adoption Records*	8 years or 25th birthday	Review and consider transfer to PoD	The health reports will feed into the primary record held by the local authority. This means that adoption records held in the NHS relate to reports that are already kept in another file, which is kept for 100 years by the relevant agency and/or local authority. Consider transferring to PoD only if there are known gaps in the primary local authority record or the records pre-date 1976. (Also refer to Appendix III - Adopted Persons Health Records)
Post Mortem Records*	10 years	Review and destroy if no longer required	The Coroner will maintain and retain the primary post mortem file including the report. Local Records of post mortem will not need to be kept for the same extended time period.

CLINICAL TRIALS AN	D RESEARCH

Record Type	Retention Period	Disposal Action	Notes
Advanced Medical Therapy Research - Master File	30 years	Review and consider transfer to PoD	Further guidance can be found on <u>GOV.UK</u> .
Clinical Trials – Master File of a trial authorised under the European portal, under Regulation 536/2014	25 years	Review and consider transfer to PoD	For clinical trials records retention refer to the <u>MHRA guidance</u> .
European Commission Authorisation (certificate or letter) to enable marketing and sale within EU member state's area	15 years	Review and consider transfer to PoD	
Research - Datasets	No longer than 20 years	Review and consider transfer to PoD	

Record Type	Retention Period	Disposal Action	Notes
Research – Ethics Committee's documentation for research proposal	5 years	Review and consider transfer to PoD	 Further guidance can be found on the <u>HRA website</u>. This category applies to minutes and papers of RECs that are not held centrally by HRA. Data must be held for sufficient time to allow any questions to be answered. Data may not need to be kept once the purpose has expired – depending on the type of research. For example, data used for passing an academic exam may be destroyed once the exam has been passed and there is no further academic need to hold the data. For more significant research, a PoD may be interested in holding the research. It is best practice to consider this at the outset of any research, as orphaned personal data can cause a data breach (An orphaned record is a record which is from a service or organisation that ceases to exist and has no known successor).
Research – Ethics Committee's minutes and papers	As soon as is practically possible	Review and consider transfer to PoD	Retention period begins from the year to which they relate and can be as long as 20 years. Committee papers must be transferred to PoD.

CORPORATE GOVERNANCE

ord Type	Retention Period	Disposal Action	Notes	Record Type	Retention Period
ard Meetings*	Up to 20 years	Review and transfer to PoD	A local decision can be made on how long to retain the minutes of Board Meetings (and associated papers linked to the Board Meeting), but this must not exceed 20 years, and will be required to	Committees (Minor) – Not listed in Scheme of Delegation*	6 years
			be transferred to the local PoD or TNA (for National Bodies).	Corporate records of health and care organisations and	
oard Meetings (Closed oards)*	Up to 20 years	Review and transfer to	Although these may still contain confidential or sensitive material, they are still a public record and	providers that pre-date the NHS (July 1948)	
		PoD	must be transferred at 20 years, and any FOI exemptions noted, or indications that the duty of confidentiality applies.	Data Protection Impact Assessments (DPIAs)	6 years
Thief Executive Records*	Up to 20 years	Review and transfer to PoD	This may include emails and correspondence where they are not already included in board papers.	Destruction Certificates or Record of Information held on destroyed physical	20 years
ommittees (Major) – isted in Scheme of velegation or report	Up to 20 years	Review and transfer to		media	
lirect into the Board including Major Projects)*		PoD		Electronic Metadata Destruction Stub/s	
Committees (Minor) – Not listed in Scheme of Delegation*	6 years	Review and consider transfer to PoD	Includes minor meetings/projects, and departmental business meetings. These may have local historical value required transfer consideration.	Incidents – Serious	20 years

Disposal Action	Notes
Review and consider transfer to PoD	Includes minor meetings/projects, and departmental business meetings. These may have local historical value required transfer consideration.
Review and transfer to PoD	Contact your local PoD to arrange review and transfer. Records not selected by the PoD must be securely destroyed.
Review and destroy if no longer required	Should be kept for the life of the activity to which it relates, plus six years after that activity ends. If the DPIA was one -off, then 6 years from completion.
Review and dispose of if no longer required	Where a record is listed for potential transfer to PoD have been destroyed without adequate appraisal, consideration should be given to a selection of these as an indicator of what has not been preserved.
	Refer to Destruction Certificates.
Review and consider transfer to PoD	Retention begins from the date of the Incident – not when the Incident was reported.

Record Type	Retention Period	Disposal Action	Notes
Incidents – Not Serious	10 years	Review and destroy if no longer required	Retention begins from the date of the Incident – not when the Incident was reported.
Incidents – Serious Incidents requiring Investigation	20 years	Review and consider transfer to PoD.	These include independent investigations into incidents. These may have permanent retention value so consult with the local PoD. If they are not required, then destroy.
Non-Clinical QA Records	12 years	Review and destroy if no longer required	Retention begins from the end of the year to which the assurance relates.
Patient Advice and Liaison Service (PALS) records	10 years	Review and destroy if no longer required	Retention begins from the close of the financial year to which the record relates.
Patient Surveys – individual returns and Analysis	1 year after return	Review and destroy if no longer required	May be required again if analysis is reviewed.
Patient Surveys – Final Report	Permanent retention	Review and consider transfer to PoD	

Record Type	Retention Period	Disp Actio
Policies/Strategies and Operating Procedures – including Business Plans*	Life of Organisati on plus 6 years	Revie and cons trans PoD

iew I troy if longer uired	Retention period in accordance with the Limitation Act and Corporate Awareness of risks.
riew l troy if longer uired	Forms are anonymous so do not contain PID unless provided in free text boxes. May be required again if analysis is reviewed.
riew I sider nsfer to D	
iew I troy if longer uired	Retention period in accordance with the Limitation Act 1980

COMMUNICATIONS

Record Type	Retention Period	Disposal Action	Notes
Intranet Site*	6 years	Review and consider transfer to PoD	
Patient Information leaflets	6 years	Review and consider transfer to PoD	These do not need to be leaflets from every part of the organisation. A central copy can be kept for potential transfer.
Press Releases and important internal Communications	6 years	Review and consider transfer to PoD	Press releases may form part of a significant part of the public record of an organisation which may need to be retained.
Public Consultations	5 years	Review and consider transfer to PoD	Whilst these have a shorter retention period, there may be wider public interest in the outcome of the consultation (particularly where this resulted in changes to the services provided) and so may have historical value.
Website*	6 years	Review and consider transfer to PoD	The PoD may be able to receive these by a regular crawl. Consult with the PoD on how to manage the process. Websites are complex objects, but crawls can be made more effective if certain <u>steps are</u> <u>taken</u> .

STAFF RECORDS AND OCCUPATIONAL HEALTH ESTATES

Record Type	Retention Period	Disposal Action	Notes
Building Plans, including Records of major building works	Lifetime (or disposal) of building plus 6 years	Review and consider transfer to PoD.	Building plans and records of works are potentially of historica interest and where possible, should be kept and transferred to the local PoD.
CCTV	Refer to ICO Code of Practice	Review and destroy if no longer required	The length of retention must be determined by the purpose for which the CCTV has been used.
Equipment monitoring, and testing and maintenance work where ASBESTOS is a factor	40 years	Review and destroy if no longer required	Retention begins from the completion of the monitoring or testing.
Equipment monitoring – general testing and maintenance work	10 years	Review and destroy if no longer required	Retention begins from the completion of the testing and maintenance.
Inspection Reports	Lifetime of Installation	Review and dispose of if no longer required	Retention begins at the END of the Installation period.

Record Type	Retention Period	Disposal Action	Notes
Leases	12 years	Review and destroy if no longer required	Retention begins at point of lease termination.
Minor Building works	6 years	Review and destroy if no longer required	Retention begins at the point of WORKS COMPLETION.
Photographic Collections – Service locations, events and activities	Up to 20 years	Review and consider transfer to PoD	These provide a visual historical legacy of the running and operation of an organisation. They may also provide secondary uses, such as use in Public Inquiries.
Radioactive Waste	30 years	Review and destroy if no longer required	Retention begins at the CREATION of the waste.
Sterilix Endoscopic Disinfector Daily Water Cycle Test, Purge Test, Ninhyndrin Test	11 years	Review and destroy if no longer required	Retention begins from the DATE OF TEST.
Surveys – Building or Installation (not Patient Surveys)	Lifetime of installation or building	Review and consider transfer to PoD	Retention period begins at the END of INSTALLATION period.

Appendix II: Retention Schedule

FINANCE

Record Type	Retention Period	Disposal Action	Notes
Accounts	3 years	Review and destroy if no longer required	Retention begins at the CLOSE of the financial year to which they relate. Includes all associated documentation and records for
Benefactions	8 years	Review and consider transfer to PoD	the purpose of audit. These may already be in the financial accounts and may be captured in other reports/records/ committee papers. Benefactions, endowments, Trust Fund/Legacies should be offered to the local PoD.
Debtors' Records – CLEARED	2 years	Review and destroy if no longer required	Retention begins at the CLOSE of the financial year to which they relate.
Debtors' records – NOT CLEARED	6 years	Review and destroy if no longer required	Retention begins at the CLOSE of the financial year to which they relate.
Donations	6 years	Review and destroy if no longer required	Retention begins at the CLOSE of the financial year to which they relate.

Disposal Action	Notes
Review and destroy if no longer required	Retention begins at the CLOSE of the financial year to which they relate.
Review and transfer to PoD	These should be transferred when practically possible, after being retained locally for a minimum of 6 years. Ideally, these will be transferred with Board Papers for that year to keep a complete set of governance papers.
Review and destroy if no longer required	Retention begins at the CLOSE of the financial year to which they relate.
Review and destroy if no longer required	
Review and destroy if no longer required	Retention begins at the CLOSE of the financial year to which they relate.

LEGAL, COMPLAINTS AND INFORMATION RIGHTS

Record Type	Retention Period	Disposal Action	Notes
Private Finance Initiatives (PFI) files	Lifetime of PFI	Review and consider transfer to PoD	Retention begins at the END of the PFI agreement. This applies to the key papers only in the PFI.
Staff Salary Information/Files	10 years	Review and destroy if no longer required	Retention begins at the CLOSE of the financial year to which they relate.
Superannuation Records	10 years	Review and destroy if no longer required	Retention begins at the CLOSE of the financial year to which they relate.

Record Type	Retention Period	Disposal Action	Notes
Complaints – Case Files	10 years	Review and destroy if no longer required	Retention begins at the CLOSURE of the complaint. The complaint is not closed until all processes (including potential and actual litigation) have ended. The complaint file must be kept separately from the patient file (if the complaint is raised by a patient or in relation to). Complaints files must always be separate. (Also refer to Appendix III - Complaints records).
Fraud – Case Files	6 years	Review and destroy if no longer required	Retention begins at the CLOSURE of the case. This also includes cases that are both proven and unproven.
Freedom of Information (FOI) requests, responses to the request and associated correspondence	3 years	Review and destroy if no longer required	Retention begins from the CLOSURE of the FOI request. Where redactions have been made, it is important to keep a copy of the response sent to the requestor. In all cases, a log must be kept of requests and the response sent.
FOI requests – where there has been an appeal	6 years	Review and destroy if no longer required	Retention begins from the CLOSURE of the appeal process.

Record Type	Retention Period	Disposal Action	Notes
Industrial relations – including tribunal case records	10 years	Review and consider transfer to PoD.	Retention begins at the CLOSE of the financial year to which it relates. Some organisations may record these as part of the staff record, but in most cases, they should form a distinctive separate record (like complaints files).
Litigation Records	10 years	Review and consider transfer to PoD	Retention begins at the CLOSURE of the case. Litigation cases of significant or major issues (or with significant/major outcomes) should be considered for transfer. Minor cases should not be considered for transfer. If in doubt, consult with the PoD.
IntellPatents, Trademarks, Copyright, IP	Lifetime of Patent, or 6 years from end of licence/ action	Review and consider transfer to PoD	Retention begins at the END of lifetime or patent, or TERMINATION of licence/action.
Software licences	Lifetime of Software	Review and destroy if no longer required	Retention begins at the END of lifetime of Software.

Record Type	Retention Period	Disposal Action	Notes
Subject Access Requests (SAR), response, and subsequent correspondence	3 years	Review and destroy if no longer required	Retention begins at the CLOSURE of the SAR.
SAR – where there has been an appeal	6 years	Review and destroy if no longer required	Retention begins at CLOSURE of appeal.

Appendix III: How to deal with specific types of records

This Appendix provides detailed advice on records management relating to specific types of records e.g. transgender records; witness protection records and adopted persons records. These are presented in alphabetical order. It also provides advice on managing certain formats of records e.g. emails, cloud-based records and scanned records.

Type of Record

Adopted Persons Health Records

Notwithstanding any other centrally issued guidance by the Department for Health and Social Care or Department for Education, the records of adopted persons can only be placed under the new last name when an adoption order has been granted. Before an adoption order is granted, an alias may be used but more commonly the birth names are used.

Depending on the circumstances of the adoption there may be a need to protect from disclosure any information about a third party. Additional checks before any disclosure of adoption documentation are recommended because of the heightened risk of accidental disclosure.

It is important that any new records, if created, contain sufficient information to allow for a continuity of care. At present the GP would initiate any change of NHS number or identity if it were considered appropriate to do so following the adoption.

Ambulance Service Records

Ambulance service records will contain evidence of clinical interventions delivered and are therefore clinical records. This means that they must be retained for the same time as other acute or mental health clinical records depending on where the person is taken to for treatment. Where ambulance service records are not clinical in nature, they must be kept as administrative records. There is a distinction between records of patient transport and records of clinical intervention. If the ambulance clinical record is handed over to another service or NHS Trust, there must be a means by which the Ambulance Trust can obtain them again if necessary. Alternatively, they can be copied and only the copy transferred providing this is legible.

Asylum Seeker Records

Records for asylum seekers must be treated in exactly the same way as other care records, allowing for clinical continuity and evidence of professional conduct. Organisations may decide to give asylum seekers patient/service user held records or hold them themselves. Patient/service user held records should be subject to a risk assessment because the record legally belongs to the organisation, and if required, they must be able to get it back. There is a risk that patient/service user held records could be tampered with or altered in an unauthorised way so careful consideration needs to be given to this decision.

Child School Health Records

Similar to Family Records (refer to page 91), each child should have their own school health record rather than a record for the school (with consecutive entries) or per year intake. If a child transfers to a school under a different local authority, then the record will also need to be transferred to the new school health service provider. This must only be done once it is confirmed the child is now resident in the new location. The record must be transferred securely. The recipient of the record should contact the sender to confirm receiving the record (if appropriate). If the records are kept on school premises, then access must be restricted to health staff delivering care or other staff who have a legitimate reason to access them.

Local organisations may operate a paper or electronic system. Records from other child health teams, following a referral, must be accepted by the receiving organisation regardless of format. This is due to safeguarding risks.

Complaints Records

Where a patient or service user complains about a service, it is necessary to keep a separate file relating to the complaint and subsequent investigation. Complaint information should never be recorded in the clinical record. A complaint may be unfounded or involve third parties and the inclusion of that information in the health or care record will mean that the information will be preserved for the life of the record and could cause detrimental prejudice to the relationship between the patient/service user and the health and care team.

Where multiple teams are involved in the complaint handling, all the associated records must be brought together to form a single record. This will prevent the situation where one part of the organisation does not know what the other has done. A complaint cannot be fully investigated if the investigation is based on incomplete information. It is common for the patient/service user to ask to see a copy of their complaint file and it will be easier to deal with if all the relevant material is in one file. Where complaints are referred to the Ombudsman Service, a single file will be easier to refer to.

Health and care organisations should have a local policy to follow with regards to complaints, covering how information will be used once any complaint is raised, and after the complaint has been investigated, regardless of outcome. The ICO has also issued guidance on complaints files and who can have access to them, which will drive what must be stored in them.

Contract Change Records

Once a contract ends, any service provider still has a liability for the work they have done and, as a general rule, at any change of contract the records must be retained until the time period for liability has expired.

In the standard <u>NHS contract</u> there is an option to allow the commissioner to direct a transfer of care records to a new provider for continuity of service and this includes third parties and those working under any qualified provider contracts. This will usually be to ensure the continuity of service provision (for current cases) upon termination of the contract. It is also the case that after the contract period has ended, the previous provider will remain liable for their work. In this instance there may be a need to make the records available for continuity of care or for professional conduct cases.

When a service is taken over by a new Provider, the records of the service (current and discharged cases) all transfer to the new Provider (unless directed otherwise by the Commissioner of the service). This is to ensure that the records for the service remain complete and enable patients/service users to obtain their record if they so request it. It also makes the records easier to locate if they are required for other purposes. This will also stop the fragmentation of the archive records for the service and make it much easier to retrieve records.

Where legislation creates or disbands public sector organisations, the legislation will normally specify which organisation holds liability for any action conducted by a former organisation. This may also include consideration of the identity of the legal entity, which must manage the records.

Where the content of records is confidential, for example health and care records, it will be necessary to inform the individuals concerned about the change. Where there is little impact upon those receiving care, it may be sufficient to use posters and leaflets to inform people about the change, but more significant changes will require individual communications. Although the conditions of the DPA18 may be satisfied, in many cases there is still a duty of confidentiality which may require a patient or service user (in some cases) to agree to the transfer, dependent upon the legal basis and the implications of their choice discussed with them. If the new Provider has a statutory duty to provide the service, then consent does not need to be sought. If there is no statutory duty, then consent would need to be sought to satisfy common law duty of confidentiality.

It is vital to highlight the importance of actively managing records, which are stored in offsite storage (refer to section three of the Code for further information on offsite storage including the importance of completing a DPIA).

Annex 1 of this Appendix summarises the considerations and actions required relating to various contract change situations.

Continuing Healthcare (CHC) Records

Continuing healthcare records can be split into two parts:

• Care record - The care record is the information relating to a patient/service user's care that enables the CHC panel to determine eligibility for CHC based on an assessment of needs. This can be provided directly by the patient/ service user or obtained from health and care providers as part of the eligibility process. Consent to obtain this information would be required to satisfy the duty of confidence. The initial checklist completed by the referrer may also contain some level of confidential information and this may also be used to determine eligibility.

• Administrative record - The Administrative Record is the information used by the CCG to ensure the CHC process runs effectively – an example being appointment letters asking the patient/service user to attend a panel. CCGs require access to health and care information to determine a patient/service user's entitlement (once the CCG has been notified).

CHC activity is covered in law by the 2012 Commissioning Board and NHS CCG Regulations. This means consent is not required to process personal data in relation to CHC but consent will be required to satisfy the duty of confidence. CCGs will need to have systems in place to allow for the safe and secure sharing of patient/service user information with relevant partners as necessary, and to inform patients/service users of how their data will be used as part of this process. Electronic viewing and sharing of records may be preferable to paper copies being printed and used for CHC, due to the risk of accidental loss or disclosure.

Controlled Drugs Regime

NHS England, in conjunction with the NHS Business Services Authority, has established procedures for handling information relating to controlled drugs. This guidance includes conditions for storage, retention and destruction of information. Where information about controlled drugs is held please refer to NHS England guidance.

Duplicate Records

The person or team to which the record relates will normally hold the original record however occasionally duplicates may be created for legitimate business purposes. It is not necessary to keep duplicates of the same record unless it is used in another process and is then a part of a new record. Where this is not required, the original should be kept and the duplicate destroyed. For example, incident forms, once the data is entered into the Risk Information System, the paper is now a duplicate, and so can be destroyed. Some clinical systems allow printouts of electronic records. Where printouts are used, these must be marked as duplicates or copies to help prevent them from being used as the primary record.

Evidence required for courts

In UK Law the civil procedure rules allow evidence to be prepared for court and, as part of this, the parties in litigation can agree what documents they will disclose to the other party and, if required, dispute authenticity. The disclosure of electronic records is referred to as E-Disclosure or E-Discovery. The relevant rule for disclosure and admissibility of evidence is given in the Ministry of Justice's Civil Procedure Rules' Rules and Practice Directions as Rule 31. If records are arranged in an organised filing system, such as a business classification scheme, or all the relevant information is placed on the patient or client file, providing records as evidence will be much easier.

Family Records

Family records used to be common within Health Visiting Teams, amongst others, where a whole family view was needed to deliver care. Whilst these records should no longer be created, they are included here for legacy reasons.

Due to changes in the law and best practice, it is not advisable to create a single paper/electronic record that contains the care given to all family members. Each person is entitled to privacy and confidentiality, and having all a person's records in one place could result in a health professional or family member accessing confidential information of another family member accidentally or otherwise.

Good practice would be to create an individual file for each person but with cross references to other family members. This means that each individual has their own record but health and care professionals can see who else is related to that person, and so can check these records where necessary. Single records also help to protect privacy and confidentiality and (if electronic) keep an audit trail of access.

General Practitioner Records

It is important to note that the General Practitioner (GP) record, usually held by the General Practice, is the primary record of care and the majority of other services must inform the GP through a discharge note or a clinical correspondence that the patient has received care. This record is to be retained for the life of the patient plus at least ten years after death. The GP record

transfers with the individual as they change GP throughout their lifetime. Where the patient has de-registered, records should be kept for 100 years since deregistration. A review is taking place to ascertain how long this period should be in the going forwards.

Current guidance advises that the content of paper Lloyd George records should only be destroyed once they have been scanned to the required standard and quality assurance of the scanned images has been completed, confirming that they are a like for like copy of the original paper records. The Lloyd George envelope itself should not be destroyed at the current time and must be kept to meet with the requirements for patient record movement. NHS England is currently undertaking a project to cease the creation of Lloyd George Envelopes for all new entrants to the NHS which is due to be implemented by December 2020, they are also looking at ways to enable destruction of existing Lloyd George envelopes, though this aspect may have a longer implementation timeframe. This Code will be updated as the programme develops.

Individual Funding Requests (IFRs)

Similar to Continuing Healthcare, IFR cases are mainly administrative records, but also contain large amounts of personal/confidential patient information and as such, should be treated in the same way as CHC records.

As IFRs are unique to an individual, it may be that the care package given to the patient/service user is unique and bespoke to that person. This could mean that the record may have long-term archival value, due to the uniqueness of the care given in this way, and so potentially may be of interest to TNA. Local discussions should be held with the Place of Deposit to determine the level of local interest, although they would not normally get involved at this level of discussion. It would be a joint discussion on the principle and agreement to archive this type of record and then the responsibility of the health and care organisation to choose individual records that meet this criteria.

Integrated Records

Since 2013, there has been an increase in the number of initiatives promoted and launched that involve integrated records. There has also been recognition nationally that joined up delivery of health and care services can increase the

quality of care delivered, and also deliver those services more efficiently. Examples include:

- NHS England Vanguard Programme
- Sustainability and Transformation Plans (STPs)
- Integrated Care Services (ICS)
- Local Health and Care Records (LHCR)

Depending on the agreements under which integrated records are established these may be subject to the Public Records Act. Generally if an NHS Body is at least partly responsible for the creation and control of the record, it will normally be considered a public record to be managed in accordance with the Act. The relevant Place of Deposit should be notified that this is the case. If in doubt, consult with TNA.

The options for organisations will depend on what local architecture and systems are already in use. There are three types of retention for integrated records, and suggested retention periods for each:

- All organisations contribute to a single record, creating the only record for in practice (e.g. some records will be retained for 8 years and some for 20 years but they will look the same at face value) (retain for the longest specialty period involved).
- All organisations pool their records into a single place but keep a level of separation between each type of record (retain for each specialty as applicable – because they are not merged)
- All organisations keep their own records, but allow others to view their records, but not amend/add to (retain for each specialty as applicable – because they are not merged)

that patient/service user. Consideration must be given to how this is managed

Also refer to the section on Integrated viewing technology and Record Keeping.

Occupational Health (OH) Records

Occupational health records are not part of the main staff record and for reasons of confidentiality they are held separately. It is permitted for reports or summaries to be held in the main staff record where these have been requested by the employer and agreed by the staff member. When occupational health records are outsourced, the organisation must ensure that:

- Staff are aware of the outsourcing and how their information may be used for OH purposes
- The Contractor can comply as necessary with Data Protection and Confidentiality requirements
- There is a contract in place with the outsourced provider that has legally binding clauses in relation to Data Protection and Confidentiality
- The contractor can retain the records for the necessary period after the termination of contract for purposes of adequately recording any work-based health issues and is able to present them to the organisation if required.

Patient/Service User Held Records

Some clinical or care services may benefit from the patient/service user holding their own record e.g. maternity services. Where this is considered to be the case a risk assessment should be carried out by the organisation. Where it is decided to leave records with the individual who is the subject of care, it must be indicated on the records that they remain the property of the issuing organisation and include a return address if they are lost. Upon the discharge of the patient/service user, the record must be returned to the health or care organisation involved in the person's care.

Organisations must be able to produce a record of their work, which includes services delivered in the home where the individual holds the record. Upon the termination of treatment, where the records are the sole evidence of the course of treatment or care, they must be recovered and given back to the issuing organisation.

A copy can be provided if the individual wishes to retain a copy of the records through the Subject Access Request process. In cases where the individual retains the actual record after care, the organisation must be satisfied it has a record of the contents.

Prison Health Records

In 2013 responsibility for offender health in HM Prison Service transferred from the Ministry of Justice to NHS England. A national computer-based record was created to facilitate the provision of care and the transfer of care records associated with inmate transfers throughout imprisonment

A significant number of paper records remain and some offender health services operate a mix of paper and electronic health records. Prison records should be treated as hospital episodes and may be disposed of after the appropriate retention has been applied. The assumption is that a discharge note has been sent to the GP.

Where a patient/service user is sent to prison the GP record (or social care record) must not be destroyed but held until the patient is released or normal retention periods of records have been met.

Prison Health records may have archival value but this is the exception rather than rule. Records should be kept in line with the same period as for deregistered GP records, with a view to further retention (with justification) and a potential transfer to a PoD, subject to their approval.

Private Patients treated on NHS premises

Where records of individuals who are not NHS or social care funded are held in the record keeping systems of NHS or social care organisations, they must be kept for the same minimum retention periods as other records outlined in this Code. The same levels of security and confidentiality will also apply.

Public Health Records

A local authority normally hosts public health functions but the functions still involve the handling of health and care information. For this reason, public health functions are in the scope of this Code. Where clinical information is being processed by the public health function it is expected to comply with the NHS Digital Code of Practice for Confidential Information.

Records relating to Sexually Transmitted Diseases

Organisations that provide care and support under the NHS Trusts and Primary Care Trusts (Sexually Transmitted Disease) Directions 2000 must be aware of the additional obligations to confidentiality these impose on employees and Trustees of organisations. These organisations include NHS Trusts, CCGs, local authority public health teams and those providing services under NHS contract.

This obligation differs from the duty of confidentiality generally because it prohibits some types of sharing but enables sharing where this supports treatment of patients/service users. For this reason, it is common for services dealing with sexually transmitted diseases to partition their record keeping systems to comply with the Directions and more generally to meet patient/ service users expectations that such records should be treated as particularly sensitive.

Secure Units for Patients Detained Under the Mental Health Act 1983

Mental Health Units operate on a low, medium and high-risk category basis. Not all patients on these units will have been referred via the criminal justice system. Some patients may be deemed a risk under the Mental Health Act and will need to be accommodated accordingly. Some patients may be high-risk due to the nature of a crime they have committed because of their mental health and therefore will need to be treated in a high secure hospital, such as Broadmoor. As such, their records should be treated in the same way as other mental health records including retention periods (20 years, and longer if justified and permitted) and final disposal. A long retention time may also help staff at these units deal with subsequent long-term enquiries from care providers.

Specimens and Samples

The retention of human material is covered by this Code, as some specialities will include physical human material as part of the patient/service user record (or linked to it). The record may have to be retained longer than the sample because the sample may deteriorate over time. Relevant professional bodies such as the Human Tissue Authority or the Royal College of Pathologists have issued guidance on how long to keep human material. Physical specimens and/or samples are unlikely to have historical value, and so are highly unlikely to be selected for permanent preservation.

The human material may not be kept for long periods, but that does not mean that the information or metadata about the specimen or sample must be destroyed at the same time. The information about any process involving human material must be kept for continuity of care and legal obligations. The correct place to keep information about the patient is the clinical record and although the individual pathology departments may retain pathology reports, a copy must always be included on the patient record. Physical specimens or samples do not have to be stored within the clinical record (unless designed to do so) but can be stored where clinically appropriate to keep the material, with a clear reference or link in the clinical file, so both the material and the clinical record can be joined together if necessary.

Staff Records

Staff records should hold sufficient information about a staff member for decisions to be made about employment matters. The nucleus of any staff file will be the information collected through the recruitment process and this will include the job advert, application form, evidence of the right to work in the UK, identity checks and any correspondence relating to acceptance of the contract. The central HR file must be the repository for this information, regardless of the media of the record.

It is common practice in some health and care organisations for the line manager to hold a truncated record, which contains portions of an employee's employment history. This can introduce risk to personal information (as it is duplicated), but also potentially expedient to do so. Organisations considering

whether to use, or discontinue using, local HR files, should complete a Risk Assessment.

Information kept in truncated staff files should be duplicates of the original held in the central HR file. If local managers are given originals as evidence (such as a staff member bringing in a certificate of competence) they should take a copy for local use and the original should be kept with the main HR file. It is important that there is a single, complete employment record held centrally for reference and probity.

Upon termination of contract (for whatever reason), records must be held up to and beyond the statutory retirement age. Staff records may be retained beyond 20 years if they continue to be required for NHS or organisational business purposes, in accordance with Retention Instrument 122. Usually this relates to inpatient ward areas, where the ward manager will keep a small file relating to the training and clinical competencies of ward staff. Where there is justification for long retention periods or protection is provided by the Code, this will not be in breach of GDPR Principle 5 (refer to section 5 of the Code for further information about retention of records).

Some organisations operate a weeding system, whereby staff files are culled of individual record types that are now time expired (such as timesheets). Others have just kept the whole file as is and archived it away until 75th birthday. It is not recommended to change your system from one to the other because:

- The effort involved would be disproportionate to the end result
- If you begin to weed files, you would need to do this retrospectively to all files, to avoid having two types of central HR file
- You cannot reverse the weeding process if you decide to keep full records, it is impossible to remake historically weeded files complete again.

Both systems are acceptable, regardless of media. It is noted that organisations may have a hybrid system of paper historical staff files and electronic current staff files. If possible, organisations should consider moving all their files into one format to create consistency.

Where an organisation decides to use a summary, it must contain as a minimum:

- A summary of the employment history with dates
- Pension information including eligibility
- Any work-related injury
- Any exposure to asbestos, radiation and other chemicals which may cause illness in later life
- Professional training history and professional qualifications related to the delivery of care
- List of buildings where the member of staff worked and the dates worked in each location

Good Practice for a Staff Record Summary:

Barts Health NHS Trust staff record summary contains the following fields:

- Name •
- Previous names •
- Assignment number •
- Pay Bands
- Date of Birth
- Addresses
- Positions held •
- Start and end dates •
- **Reasons for leaving** •
- Building or sites work at

Disciplinary case files should be held in a separate file so they can be expired at the appropriate time and do not clutter up the main file. That does not mean that there should be no record that the disciplinary process has been engaged in the main record, as it may be pertinent to have an indication to the disciplinary case, but the full details and file must be kept separately from the main file.

With regards to staff training records, it can be difficult to categorise them to determine retention requirements but keeping all the records for the same length of time is also hard to justify. It is recommended that:

- Clinical training records are retained until 75th birthday or six years after the staff member leaves; whichever is the longer
- Statutory and mandatory training records are kept for ten years after training is completed
- Other training records are kept for six years after the training is completed

Transgender Records

Some patients may undergo medical treatment to change their gender. Records relating to these patients/service users are often seen as more sensitive than other types of medical records, and the use and disclosure of the information contained in them is subject to the Gender Recognition Act 2004.

There are established processes in place with NHS Digital for patients undergoing transgender care in relation to the NHS number and the closing and opening of new Spine records. In practice, nearly all actions relating to transgender records will be based on explicit consent under common law. Discussions will take place between the GP and the patient regarding clinical care, what information in their current record can be moved to their new record and any implications this decision may have e.g. a patient may not be called for a gender specific screening programme. Any decisions made regarding their record must be respected and the records actioned accordingly.

A patient/service user can request that their gender be changed in a record by a statutory declaration but this does not give them the same rights as those that can be made by the Gender Recognition Act 2004. The formal legal process (as

defined in the Gender Recognition Act 2004) is that a Gender Reassignment Panel issues a Gender Reassignment Certificate. At this time a new NHS number can be issued, and a new record can be created, if it is the wish of the patient/ service user. It is important to discuss with the patient/service user what records are moved into the new record and to discuss how to link any records held in any other institutions with the new record. The content of the new record will be based on explicit consent under common law.

Witness Protection Health Records

Where a record is that of someone known to be under a witness protection scheme, the record must be subject to greater security and confidentiality. It may become apparent (via accidental disclosure) that the records are those of a person under the protection of the courts for the purposes of identity. The right to anonymity extends to health and care records. For people under certain types of witness protection, the individual will be given a new name and NHS Number, so the records may appear to be that of a different person.

Youth Offending Service Records

Due to the nature of youth offending it is common for very short retention periods to be imposed on the general youth offending record. For purposes of clinical liability and for continuity of care the health or social care portion of the record must be retained as specified in this Code, which will generally be until the 25th birthday of the individual concerned.

Format of record

Bring Your Own Device (BYOD) created records

Any record that is created in the context of health and care business is the intellectual property of the employing organisation and this extends to information created on personally owned computers and equipment. This in turn extends to emails and text messages sent in the course of business on personally owned devices from personal accounts. They must be captured in the record keeping system if they are considered to fall within the definition of a record.

When an individual staff member no longer works for the employing organisation, any information that staff take away could be a risk to the organisation. If this includes personal data/confidential patient information, it is reportable to the ICO and may be a breach of confidentiality. For this reason, personal/confidential patient information should not be stored on the device unless absolutely necessary and appropriate security is in place. Local health and care organisations should have a policy on the use of BYOD by staff. Also refer to guidance on BYOD.

Cloud-Based Records

Use of cloud-based solutions for health and care is increasingly being considered and used as an alternative to managing large networks and infrastructure. Before any cloud-based solution is implemented there are a number of records considerations that must be addressed as set out by the TNA. The ICO has issued guidance on cloud storage. Organisations must complete a DPIA when considering using cloud solutions.

Another important consideration is that at some point the service provider or solution will change and it will be necessary to migrate all of the records, including all the formats, onto another solution. Whilst this may be technically challenging, it must be done, and contract provisions should be in place to do this.

Records in cloud storage must be managed just as records must be in any other environment and the temptation to use ever-increasing storage instead of good records management will not meet the records management recommendations of this Code. For example, if electronic health and care records are uploaded to cloud storage for the duration of their retention period, then they must contain enough metadata to be able to be retrieved and a retention date applied so it can be reviewed and actioned in good time.

Personal data that is stored in the cloud, and then left, risks breaching DPA18 by being kept longer than necessary. This information would also be subject to Subject Access process, and if not found or left unfound, would be a breach of the patient/service user's rights.

Email and Record Keeping Implications

Email is now seen as a communication tool used every day by all levels of staff in organisations. They often contain business (or in some cases clinical) information that is not captured elsewhere and so need to be managed just like other records. The TNA has produced guidance on managing emails.

Email has the benefit of fixing information in time and assigning the action to an individual, which are two of the most important characteristics of an authentic record. However, a common problem with email is that it is rarely saved in the business context.

The correct place to store email is in the record keeping system according to the business classification scheme or file plan activity to which it relates. Solutions such as email archiving and ever-larger mailbox quotas do not encourage staff to meet the standard of storing email in the correct business context and to declare the email as a record.

- Where email archiving solutions are of benefit is as a backup, or to identify key individuals where their entire email correspondence can be preserved as a public record.
- Where email is declared as a record or as a component of a record, the entire email must be kept, including attachments so the record remains integral for example an email approving a business case must be saved with the business case file. All staff need to be adequately trained in required email storage and organisations need to:
- Undertake periodic audits of working practice to identify poor practice
- Have a policy in place that covers email management
- Take remedial action where poor practice or compliance is found

Automatic deletion of email as a business rule may constitute an offence under Section 77 of the FOIA where it is subject to a request for information, even if the destruction is by automatic rule. The Courts' civil procedure rules 31(B) also require that a legal hold is placed on any information including email when an

organisation enters into litigation. Legal holds can take many forms and records cannot be destroyed if there is a known process or a reasonable expectation that records will be needed for a future legal process such as:

- Local inquiries into health or care issues
- National inquiries
- Public Inquiries
- Criminal or Civil Investigations
- Cases where litigation may be reasonably expected (e.g. a patient has indicated they will to the organisation to court)
- A Subject Access Request (known or reasonably expected)
- A Freedom of Information Request (submitted or reasonably expected)

This means that no record can be destroyed by a purely automated process without some form of review whether at aggregated or individual level for continued retention or transfer to a place of deposit.

The NHSmail system allows a single email account for every staff member that can follow the individual through the course of their career. When staff transfer from one NHS organisation to another NHS organisation, they must ensure that no sensitive data relating to the former organisation is transferred. It is good practice for staff to purge their email accounts of information upon transfer to prevent a breach of confidence or the transfer of classified information. This is facilitated by staff storing only emails that need to be retained on an ongoing basis.

Emails that are the sole record of an event or issue, for example an exchange between a clinician and a patient, should be copied into the relevant health and care record rather than being kept on the email system or deleted.

Integrated Viewing Technology and Record Keeping

Many record keeping systems pool records to create a view or portal of information, which can then be used to inform decisions. This in effect creates a single digital instance of a record, which is only correct at the time of viewing. This may lead to legacy issues, especially in determining the authenticity of a record at any given point in the past. When deciding to use systems that pool records from different sources, organisations must be assured that the system can recreate a record at a given point in time, and not just be able to provide a view at the time of access. This will enable a health or care provider to show what information was available at the time a decision was made.

Consideration should also be given to the authenticity and veracity of the record, particularly if there is conflicting information presented by two or more contributors to the record. Some conflicts may be easier to resolve than others (for example, a person has a different address with two systems), however more complex conflicts would require organisations to have a process/procedure to agree how to resolve these.

Scanned Records

This section applies to health and care records as much as it does to corporate records. When looking to scan records, organisations need to consider the following:

- The scanned image can perform equally as well as the original paper
- Scanned images can be challenged in court (just as paper can)
- Ability to demonstrate authenticity of the scanned image
- Ensure technical and organisational measures are in place to protect the integrity, usability and authenticity of the record, over its period of use and retention
- Discussions need to take place with the local Place of Deposit over records that may be permanently accessioned. They will need input into the format of the transferring record

 Where the hard copy is retained, this will be legally preferable to the scanned image

The legal admissibility of scanned records, as with any digital information, is determined by how it can be shown that it is an authentic record. An indication of how the courts will interpret evidence can be found in the civil procedure rules and the court will decide if a record, either paper or electronic, can be admissible as evidence.

The British Standards Institute has published a standard that specifies the method of ensuring that electronic information remains authentic. The standard deals with both 'born digital' and scanned records. The best way to ensure that records are scanned in accordance with the standard is to use a supplier or service that meets the standard following a comprehensive procurement exercise, which complies with NHS due diligence. For local scanning requirements or for those records where there is a low risk of being required to prove their authenticity, organisations may decide to do their own scanning following due diligence and internal compliance processes. This may require a business case to be drawn up and approved, and procurement rules followed to purchase the necessary equipment.

Once scanned records have been digitised and the appropriate quality checks completed, it will then be possible to destroy the paper original, unless the format of the original has historical value, in which case consideration should be given to keeping it with a view to permanent transfer. Where paper is disposed of post-scanning, this decision must be made by the appropriate Group or Committee. A scan of not less than 300 dots per inch (or 118 dots per centimetre) as a minimum is recommended for most records although this may drop if clear printed text is being scanned. Methods used to ensure that scanned records can be considered authentic are:

- Board or Committee level approval to scan records
- A written procedure outlining the process to scan, quality check and any destruction process for the paper record
- Evidence that the process has been followed

- Technical evidence to show the scanning system used was operating correctly at the time of scanning
- An audit trail or secure system that can show that no alterations have been made to the record after the point they have been digitised
- Fix the scan into a file format that cannot be edited

Some common mistakes occur in scanning by:

- Only scanning one side and not both sides, including blank pages. To preserve authenticity, both sides of the paper record, even if they are both the paper original
- Scanning a copy of a copy leading to a degraded image
- Not using a method that can show that the scanned record has not been altered after it has been scanned – questions could be raised regarding process and authenticity
- No long-term plan to enable the digitised records to be stored or accessed over the period of their retention

Social Media

Where social media is used as a means of communicating information for business purposes or it is a means of interacting with clients, it may be a record that needs to be kept. Where this is the case, information must be retained within the record keeping system. This may not necessarily mean that the social media must be captured but rather the information of the activity through transcription or periodic storage.

Website as a Business Record

As people interact with their public services, more commonly it is the internet and websites in particular that provide information, just as posters, publications

blank, must be scanned. This ensures the scanned record is an exact replica of

RECORDS AT CONTRACT CHANGE SCENARIOS

Characteristic of new service provider	Fair processing required	What to transfer?	Sensitive records
NHS Provider from same premises and involving the same staff. This may be a merger or regional reconfiguration	Light- notice on appointment letter explaining that there is a new provider. Local publicity campaign such as signage or posters located on premises.	Entire record or summary of entire caseload.	N/A
Non-NHS Provider from same premises and involving the same staff. This may be a merger or regional reconfiguration	Light – notice on appointment letter explaining that there is a new provider. Local publicity campaign involving signage and poster and local communications or advertising.	Copy or summary of entire record of current caseload. Former provider retains the original record.	N/A

108

and leaflets once did exclusively. A person's behaviour may be a result of interaction with a website and it is considered part of the record of the activity.

For this reason, websites form part of the record keeping system and must be preserved. It is also important to know what material was present on the website as this material is considered to have been published. Therefore, the frequency of capture must be adequate or there must be some other method to recreate what the website or intranet visitor viewed. It may be possible to arrange regular crawls of the site with the relevant Place of Deposit but given the complexity of sites as digital objects, it may be necessary to use other methods of capture to ensure that this creates a formal record. The UK Government Web Archive (part of TNA) undertook two central crawls of all NHS sites in 2011 and 2012 and may have captured some from 2004 onwards but the information captured will not include all levels of the sites or some dynamic content.

Table continues onto the following page

Characteristic of new service provider			Sensitive records	
NHS Provider from different premises but with the same staff	Light – notice on appointment letter explaining that there is a new provider. Local publicity campaign involving signage and poster and local communications or advertising.	Copy or summary of entire record of current caseload. Former provider retains the original record.	N/A	
NHS Provider from different premises and different staff	Moderate – a letter informing patients of the transfer with an opportunity to object or talk to someone about the transfer.	Copy or summary of entire record of current caseload. Orphaned records must be retained by the former provider.	Individual	

Characteristic of new service provider	Fair processing required	What to transfer?	Sensitive records
Non-NHS provider from different premises but with same staff	Moderate – a letter informing patients of the transfer with an opportunity to object or talk to someone about the transfer.	Copy or summary of entire record of current caseload. Orphaned records must be retained by the former provider.	
Non-NHS from different premises and with different staff	High – a letter informing patients of the transfer with an opportunity to object or talk to someone about the transfer.	Copy or summary of entire record of current caseload. Orphaned records must be retained by the former provider.
